Introduction

Purpose

Each year the Institute of the Motor Industry (IMI), as the Sector Skills Council (SSC) for the automotive retail sector, carries out a Sector Skills Assessment (SSA). The SSA, which is commissioned and funded by the UK Commission for Employment and Skills (UKCES), gives a high level overview of the skills needs of the sector.

In order to enable employers to prepare for the future, the IMI initiated and conducted an extensive programme of in-depth granular research, building on the SSA, to fully understand the extent of the skills and training needs across each of the 12 sub-sectors within its footprint. The purpose of this research is to recognise, at job role level, within each distinct sub-sector, precise skills and needs within the existing workforce.

It is vital that the IMI, as the SSC and the professional association for the automotive retail sector, understand employers’ immediate and critical skills needs in order to identify and/or formulate effective solutions to address these skills needs. We need to ensure that the automotive retail sector begins to improve its overall productivity and profitability. This will ultimately help business position themselves for economic recovery, when it comes, allowing them to compete in a globally competitive market.
Methodology

To achieve our stated purpose the IMI engaged with employers, stakeholders, training providers and trade associations to ensure that the research findings were accurate, validated at each stage, robust and fit for purpose.

To accomplish this, a qualitative phase of research was carried out. This involved 170 in-depth telephone interviews, each lasting one and a half hours, with employers across each of the sub-sectors. The focus of these interviews was on skills and training needs within the business, the issues facing the employer and the future challenges they envisaged over the next 18 months – 2 years. This first qualitative element (i.e. the use of open questions to gain responses) successfully defined the broad skills needs of the sub-sector.

The second phase of the research, the quantitative phase, was designed to validate and expand on the issues raised in the first phase, by the use of a telephone survey which contained the summary findings and analysis from the first stage. The telephone interview asked respondents to confirm that the skills needs identified from the in-depth interviews were accurate, they were then asked to prioritise each of the skills and training needs identified. In total, 876 employers took part in the telephone interviews, with a target of 100 from each sub-sector, to enable accurate data to be collected and robust conclusions to be drawn. This stage was complemented by a web survey, which furnished 630 additional responses, to ensure that as many employers as possible had the opportunity to respond to the questionnaires in as many different ways as possible.

The final main phase of the research involved 12 focus groups with employers to benchmark their views on skills needs against the findings from the first and second phases of the research. This enabled us to arrive at a final set of core skills needs, covering technical, management and customer service job roles.

Once all the data had been collected it was analysed by channelling the responses from the initial in-depth interviews into a much more concise number of core skills needs, using the findings from each consecutive stage of the research as the starting point for the next. By doing this, we have achieved a high level of confidence in the conclusions we have arrived at.

The first phase of research involved in-depth interviews with 10 employers across the combined roadside assistance and roadside recovery sub-sectors. The nature of qualitative interviewing allows conclusions to be drawn from small samples; essentially it is answering the ‘what’ and the ‘why’ question and not quantifying the response at this stage. In the second phase of the research 75 telephone surveys were carried out, (59 operating in the assistance sub-sector). The data on skill needs are based on 90 responses as a further 15 responses were completed online. A focus group of industry experts was also held to assist the IMI in prioritising skills needs, adding or refining the skills needs identified through the first phase. The web survey outcomes were used to assist in decision making should there be ‘borderline’ critical skills needs identified or where it was difficult to distinguish which skills needs should be categorised as critical.
Background

Across the automotive retail sector as a whole, in 2008 the sector generated £146 billion or 4.7% of all UK turnover and contributed £25 billion or 2.9% of gross value added. The sales of motor vehicles sub-sector (SIC 50.10) generated the majority of turnover (70%) and contributed the most in value added terms (47%). Geographically England, as would be expected, generated the majority share in terms of both turnover and value added at 88%.

In the latest IMI State of the Sector Report (July 2011), businesses report that trading conditions remain challenging, with 54% of companies experiencing lower orders/sales over the last six months and 66% showing lower profit margins.

Predictions for the next six months are similar, with 41% showing reduced orders/sales and 21% predicting higher sales.

Table 1. Business performance in last 6 months, compared with previous 6 months
Source: IMI State of the Sector (July 2011)
Across the whole automotive retail sector, 85% of businesses are micro, employing less than 10 people. However, they employ only 38% of the total sector workforce. While 57% of all employment is concentrated in those companies that employ over 11 (this accounts for only 14% of all companies), with the remaining 5% of the workforce working for large employers who account for less than 1% of all businesses. (See table below)

Given the make up of the automotive retail sector, we are confident that our telephone research targeted the appropriate range of businesses.

Table 2. Employees by business size
Source: Annual Business Inquiry (2008)

Respondents to this research were asked which issues affected their overall business most. It was clear that three areas were critically important:

- Impact of changes in legislation, and changes in legislation forecast over the next 18 months.
- Trading conditions – the fall in car sales in particular over the last two years and the sluggish revival (particularly important to the sales sub-sector).
- The relentless drive in technology development across all vehicle types.
Roadside recovery business approach to training and development

73% of companies interviewed in the telephone survey employed fewer than 11 people. See Table 3.

Table 3 Number of people employed. Source: IMI sample telephone interviews September 2011.
The majority of SMEs have a business plan and a training plan (see Table below), compared to 40% of micro businesses with having a business plan and 51% having a training plan. Both micro and SME organisations have invested heavily in training over the last two years, with 90% of SME and 53% of micro businesses planning to train in the next two years.

Table 4 Involvement in Training and Business Planning
Source: IMI quantitative telephone interviews September 2011

- Have a business plan: 44% (All), 40% (1-10 employees), 55% (11+ employees)
- Have a training plan: 59% (All), 51% (1-10 employees), 80% (11+ employees)
- Have a training budget: 31% (All), 27% (1-10 employees), 40% (11+ employees)
- Have undertaken formal training in the last 2 years: 75% (All), 71% (1-10 employees), 85% (11+ employees)
- Plan to undertake formal training in the next 2 years: 63% (All), 53% (1-10 employees), 90% (11+ employees)
The figure below shows the majority of SMEs (60%) have a structured training and development programme for their staff, compared to 49% of micro businesses who train when it is necessary.

The Institute of the Motor Industry - Report 2012

**Table 5 Training**
Source BMG sample telephone interviews

- The business formally trains staff and managers whenever it feels it necessary
  - 43% (All)
  - 25% (1-10 employees)
  - 49% (11+ employees)

- The business has a structured training and development programme as part of its business strategy
  - 29% (All)
  - 18% (1-10 employees)
  - 60% (11+ employees)

- The business improves skills but only informally, for example, as managers and staff go about their work and meet new situations or by reading literature, or generally by keeping up with industry changes
  - 12% (All)
  - 15% (1-10 employees)
  - 5% (11+ employees)

- The business formally trains staff and managers but only when it is obliged to do so by legislation or regulation
  - 11% (All)
  - 11% (1-10 employees)
  - 10% (11+ employees)

- The business never or hardly ever trains staff or managers
  - 3% (All)
  - 4% (1-10 employees)
  - 0% (11+ employees)

No need is the reason most often cited for not training with 100% of organisations stating that ‘the business is quite small and all staff and managers are fully skilled for their roles’. 82% of respondents stated that training courses are too expensive.
Qualitative research was carried out with 10 businesses within the combined roadside assistance and roadside recovery sub-sectors. These were prearranged telephone conversations with previously identified, appropriate staff who could comment authoritatively on relevant job roles within their business. These interviews lasted approximately one and a half hours and were conducted by researchers from BMG Research, Birmingham.

The interviews were mostly unstructured and used open questioning (i.e. they didn’t ask questions where a ‘yes’/’no’ answer could be given), covering a range of different types of organisation, mostly independents employing up to 50 people, but with a small number of franchise organisations contacted as well. Interviews were conducted across all nations, England, Scotland, N. Ireland and Wales in August 2011.

The following questions were asked by the researchers, who asked to speak to employers capable of covering at least two job roles within the interview:

- What job roles exist within the business?
- What are the current skills and training needs required by (each job role)?
- Which of these skills and training needs are particularly important or critical to your business?
- What skills and training needs do you anticipate you will have in the next two years?

The focus was on identifying skills needs related to key job roles. From the responses to the open questions it was possible to identify the training and skills needs, which are listed overleaf.
Job-role specific skills needs

The following skills needs were identified across the roadside recovery sub-sector.

Recovery drivers

- Effectively appraising the area and identifying hazards in the recovery area
- Effectively preserving evidence at a recovery area
- Effective use of ancillary lifting equipment for Heavy Vehicles
- ADR (the carriage of dangerous goods) training for Heavy Vehicles
- Health and Safety training for vehicle recovery technicians
- Effectively securing vehicles for transport
- Effective use of air bags and transporter beds to recover and remove Heavy Vehicles
- Awareness and understanding of Health and Safety
- Effectively following PAS 43
- How to effectively handle vehicles with hazardous materials
- Periodic updates to pass CPC
- Updates and bulletins on current legislation
- Updates on developments in vehicle technology
- Effective removal of large vehicles, coaches and buses
Management staff

- Developing effective communication within the recovery team
- Effective decision-making for managers
- People management – team working, motivation, recruitment, appraisals, delegation, discipline, managing targets
- Developing effective time management for managers
- Developing an effective marketing and sales function within the recovery team
- Effective ways to gain repeat business – driving a ‘customer care’ culture in the business
- Effectively managing company - wide targets through the daily targets of staff
- Maintaining positive customer relations/dealing with complaints
- How to make a profit running an efficient department
- Understanding health and safety legislation and applying it
- Developing effective IT skills for managers
- Effective report writing
- Effective handling/procedures for staff shortages
- Effectively managing wages and bonuses of staff
- Developing awareness and understanding of company law, laws that affect the business
- Effectively managing meetings – conference calls
- Having good product knowledge and awareness – new car and HV developments and new technology
- Understanding the business – how this fits in the industry structure
- Managing accounts/books

Customer service staff

- How to effectively undertake follow up calls with customers following recovery
- Effective problem solving – dealing with customers to ensure their needs are addressed
- Effective telephone skills
- Effective sales skills for customer advisers
- Understanding and awareness of costing principles for repair
- Understanding new car and HV technology
- Background understanding of new cars and HV being introduced
- Effective communication for customer service advisors
- Awareness and understanding of IT in the workplace, invoicing, accounts, booking
- How to deal effectively with complaints
- Effective counter service skills for customer advisors
Skills needs across roadside recovery sub-sector over the next two years

Respondents to the quantitative telephone survey were asked what they felt that the changes to skills and training needs would be over the next two years.

The key areas reported included:

- Periodic training to gain the CPC.
- Keeping up to date generally with changes in legislation.
- Training for updating equipment.
- Health and safety training.

One of the most striking features of the survey has been the references to new technology made in the in-depth interviews, across all sub-sectors. It is clear that respondents are aware of a significant change in the underlying make-up of vehicles, in particular the impact of advanced electronics both within the overall management and performance of the engine, and also across the brakes, gearbox, suspension and interior ‘comfort management systems’. This development impacts on how the modern vehicle works, how it needs to be maintained and serviced, and how it needs to be repaired in the event of an accident.

For people working within the sector this development has significant implications.

For managers in the automotive retail sector modern employment law is expected to change quite dramatically, especially human rights, discrimination and bribery policies. There are also likely to be changes in the way organisations communicate with customers, for example, internet, web, apps etc. There is expected to be a greater emphasis on sales across all levels and roles and a growing requirement for managers to keep up to date with human resources legislation and health and safety.

The relentless drive in technology development across all vehicle types was noted across all sub-sectors, with the impact increasingly being felt within sales, technical and customer service roles within the automotive retail sector (data taken from the IMI State of the Sector Report 2011).
Quantitative telephone survey

Once the qualitative in-depth interviews had identified the skills needs of the roadside recovery sector, the quantitative series of telephone interviews were carried out. Respondents were prompted with the skills and training needs identified in the previous stage of research and were asked to rank them in order of priority: (i) critical need, (ii) some need or (iii) no need. This survey quantified the initial set of responses and identified a potential set of skills and training needs that were seen as critical, of some need, or of no need. This phase of the research was pivotal in identifying those skills and training needs that were in need of priority action.

In total 75 interviews were conducted with employers and business owners across the roadside assistance and roadside recovery sub-sectors combined. Data on skill needs is based on 90 interviews as a further 15 questionnaires were completed online.

The final outcomes of this process are detailed in the Conclusions section of this report.

Focus groups and web survey

Focus group

The roadside recovery focus group was held in September 2011 and comprised representatives from roadside recovery employers and trade associations. The main agenda for these group meetings was to confirm the validation of the findings from the qualitative and quantitative telephone interviews. For the roadside recovery sub-sector, this particular focus group raised no issues with the outcomes of either sets of interviews. The focus group confirmed the skills and training needs of the roadside recovery sub-sector.

Web survey

The web survey was conducted across the entire automotive retail sector, with respondents identifying which sub-sector they worked in and was able to comment on. Due to some sub-sectors having a small number of respondents, the outcomes of the web survey were only factored in, if the outcomes of the qualitative and quantitative telephone interviews, along with the focus groups, did not produce an unambiguous outcome in terms of identifying the criticality of skills and training needs for the sub-sector.
Conclusions

The aim of this research was to be able to identify and prioritise the skills and training needs of the automotive retail sector at a ‘granular’ level, which has never been achieved before. We have been able to achieve this by looking at each individual sub-sector across the whole of the automotive sector footprint.

For the roadside recovery sub-sector we have achieved this aim, through a blended approach of telephone interviews, focus groups and web surveys. The methodology applied was as follows:

- Taking the skills needs identified by the in-depth telephone survey at the beginning of the research project as the basis for the analysis.

- Taking the focus group and telephone responses and comparing the skills needs identified by the group with the results from the in-depth telephone survey, to arrive at a more refined set of skills, set in a priority listing.

- Taking the website results and applying these to the outcomes of the previous stages to either confirm or change the list.

In the roadside recovery sub-sector there were very clear and unambiguous outcomes in terms of criticality in the vast majority of instances. However, the outcomes of the web survey were used to place the fifth skill need for customer service advisors.
Prioritised skills and training needs for the roadside recovery sub-sector

As a result of the three-stepped approach outlined previously, the following sets of skills and training needs were identified as critical to the roadside recovery sub-sector. They have been ranked in order of criticality with 1 seen as the most critical. The top five skill needs (when analysing data from across all research instruments) by key job role are highlighted below.

**Recovery drivers and technicians**

1. Health and safety training for vehicle recovery technicians
2. Effectively securing vehicles for transport
3. Awareness and understanding of health and safety
4. Effectively following PAS43
5. Knowledge of current legislation

**Management staff**

1. Understanding health and safety legislation and applying it within the roadside recovery sector
2. Developing awareness and understanding of company laws, laws that affect the business
3. Maintaining positive customer relations/dealing with complaints
4. How to make a profit running an efficient department
5. Effective ways to gain repeat business – driving a ‘customer care’ culture in the business

**Customer service staff/ Control centre staff**

1. Effective problem solving – dealing with customers to ensure their needs are addressed
2. Effective telephone skills
3. Effective communication for customer service advisors
4. How to deal effectively with complaints
5. Awareness and understanding of IT in the workplace, invoicing, accounts and booking
Recommendations

The skills and training needs listed in this report are those that employers have reported as being critical for their business. Numerous reports have identified the link between training and business performance. The IMI itself has recently conducted ROI studies across a number of sectors that have identified significant increases in business performance from rolling out training and accreditation programmes. The studies show that up-skilling in the automotive retail sector delivers a conservative gross value added (GVA) of £4,000 per person per annum\(^1\).

It seems that the commitment to train and develop staff is engrained within the roadside assistance and roadside recovery sub-sectors, as the demands of changing technology and legislation are ever present. Incidence of formal training – having a training plan – is 59% across the sub-sectors compared with 54% across the automotive retail sector as a whole.

The value of this project is the underlying understanding and knowledge in granular detail required to direct provision across the sub-sector and all job roles. Our challenge is to use this research to ensure that training is relevant and up to date, meeting the needs of the whole sector.

As the SSC, the IMI will focus on developing skill solutions across job roles, against the priority skills needs highlighted in this report.

The IMI commits to prioritising the development of solutions to meet the skills needs where employers have identified their need as being either critical or of some need. Therefore, solutions to the following skill needs will be progressively developed over the next 12 months.

\(^1\) www.theimi.org.uk/information/roi-ata.html
For technicians and recovery drivers.

- Updates on developments in vehicle technology.
- Awareness and understanding of health and safety.

For management staff the following were critical skills needs.

- Understanding health and safety legislation and applying it.
- Maintaining positive customer relations/dealing with complaints.

In addition, for management staff, the following skills needs were identified as key across all automotive retail sub-sectors.

- Understanding and awareness of health and safety legislations (all).
- Understanding the customer viewpoint and maintaining positive customer relationships (10 including roadside recovery).

For customer service staff the following were critical skills needs.

- Effective problem solving – dealing with customers to ensure their needs are addressed.
- How to deal effectively with complaints.

In addition, for customer service staff, the following skill needs were identified as key across all automotive retail sub-sectors.

- Effective communication skills.
- Effective problem solving – dealing with customers to ensure their needs are addressed.
- Effective telephone skills.
- How to deal effectively with complaints (10 including roadside recovery).

Only 31% of businesses in the roadside recovery sub-sector had a training budget, 82% believe that training is too expensive.

We commit to work with partners to

- Develop high quality, cost effective training.
- Ensure that the link between business performance and training is clear.

An impressive 90% of businesses in the roadside recovery sub-sector plan to train in the next two years.

As the SSC we commit to

- Further develop the innovative online CPD management system for the sector.
- Create a common template for training in the sector by ensuring that all provision has clear and measurable learning outcomes that link training to increased business performance.

59% of all roadside recovery businesses have a training plan but this reduces to 51% for micro businesses.

- We will continue to work with roadside recovery businesses to advocate the use of training plans.

The roadside recovery sub-sector demonstrates a high awareness of IMI at 77%.

- As a SSC we will work to build on the awareness of the IMI in the sub-sector and the awareness of skills solutions as being necessary for successful businesses.

We would like to express our gratitude to the employers and stakeholders who committed time to participate in the roadside recovery part of this research project.
Annex 1:

Skills and training needs by job role and priority

Given below are the detailed percentage results of the quantitative telephone survey carried out for roadside recovery sub-sector.
