

*“The main advantage I found with IMI eLearning was the ease of access to all training material. The specific questions relating to each topic is an excellent resource to assess knowledge and learning during the subject in a formative manner. I also found the 3D graphics for dismantling components very useful when it comes to explaining a particular sub-assembly.”*

- Liam Thompson, Transport Training Services, Belfast

## OVERVIEW

The Light Vehicle modules of the IMI eLearning platform provide useful learning resources for learners who are undertaking qualifications or training in Light Vehicle.

The platform uses blended multimedia learning styles, including video, voiceover and photographs to enhance study opportunities for students, enabling a more interactive and enjoyable learning experience.

## WHO IS IT FOR?

The Light Vehicle modules have been specifically designed to support learners and training providers delivering qualifications in Light Vehicle covering the full curriculum syllabus for Entry Level, Level 1, Level 2 and Level 3 awards.

The platform supports learners through the curriculum using a variety of learning options to suit individual study preferences and allows tutors to track their learners' progress.

## HOW DOES IT WORK?

IMI eLearning uses an interactive method of learning through a variety of activities, videos, 3D imagery and comprehensive explanations. The material is updated frequently to reflect the latest technologies, equipment and qualification requirements.

The platform contains information and tutorials on a variety of Light Vehicle topics, including the four-stroke cycle, where the operation of an engine is illustrated, and students can annotate each area. The platform is designed to allow learners to follow step-by-step instructions to understand and process accurate working methods.

## LIGHT VEHICLE – MODULE CONTENT

The modules covered within IMI eLearning Light Vehicle include all of the syllabus requirements for those studying Entry Level, Level 1, 2 and 3 qualifications. Examples of the modules available on the platform include:

- Routine Light Vehicle Maintenance
- Engine, electrical, chassis and driveline units and components
- Engine and Component Faults
- Chassis System Faults
- Transmission and Driveline System Faults
- Electrical System and Component Faults

## KEY BENEFITS

- High quality resources that will assist students' learning
- Cost-effective support resources
- Tracking system enabling teachers to monitor learners' progress
- Tailored learning for students through a variety of learning methods
- Access to practice questions to help prepare learners for examination
- Reduces teacher preparation time allowing staff to concentrate on teaching rather than locating study materials
